

Implementing Inheritance in Java

1. Unlike C++, **Java** doesn't provide an **inheritance specifier** like public, protected, or private, i.e., you can not specify mode of inheritance.
2. Java does not support multiple inheritance.

Implementing Inheritance in Java

```
class SuperClass {  
    // SuperClass fields and methods  
}  
  
class SubClass extends SuperClass {  
    // SubClass fields and methods, it includes those inherited from S  
}
```
